QUESTIONS

1. Tax Pass-Through Elasticity

How much of global fuel price change is passed to retail prices across countries?

---

2. Subsidy Cushion Effect

Do higher fuel subsidies reduce the transmission and volatility of global oil price changes in domestic fuel markets?

---

3. Price Convergence / Divergence

Are fuel prices across the 12 countries converging or diverging over time?

---

4. Volatility Decomposition

Is price volatility driven more by global price movement or domestic policy (tax/subsidy)?

---

5. Petrol vs Diesel Policy Bias

Which countries systematically favour diesel over petrol (or vice versa) through taxation?

---

6. Outlier Detection (Policy Shock)

Identify dates where domestic prices deviate significantly from expected values based on global trends.

---

7. Rolling Volatility (Time-Series)

How does rolling 3-month or 6-month volatility differ across countries?

---

8. Shock Absorption Index

Which countries absorb global shocks vs transmit them fully in 2026?
